```
On the PC that has the CvLink installed:

1)   Download the self-extracting zip file to your PC. Choose "Save To Disk". If this is the PC that you run the CvLink software on, proceed. Else, you'll need to copy the downloaded install to the PC that you want to run it upon.

2)   Once downloaded, double-click the downloaded file. This starts the installer.

      If you are running Windows Vista, Windows 7, 8, or 10, we recommended that you start the installation program by right-clicking on it and choosing the Run As Administrator command.

3)   This update is password protected. Enter   **view**   in lower case then click Next.

4)   After entering the password, the files will be copied to your PC. It copies them to the default CvLink folder --> C:\Program Files (x86)\TradeSoft\Cv Link, if you are running a 64-bit version of Windows. The default is C:\Program Files\TradeSoft\Cv Link if you are running a 32-bit version of Windows. If you installed CvLink somewhere else, click the Browse button and navigate to the proper directory.

5) Click Next to start the installation. When the installation is completed, close the Installer window.
